EGG, LARVA – DYSSOMNIA

Larva is a cage where moths bleed silk, sleep woven.

The cage a bed.

*Collect, kill and mount specimen.*

Three cages comatose.

These cages bled.

*Catch specimen in aerial net.*

*Pinch thorax between thumb and forefinger.*

*Slide specimen into envelope; store in box with insecticide.*

Inhale to sleep crows on crows of army worms; uncontrol cannibalistic owl moths.

*Relax dried specimen by placing in humid environment.*

Enter. Sleep nd ream. elcm

*Use fungicide to prevent mould growth on specimen.*

nether leap, the flights, coalesceTHE#FLIGHTSimplode, coal

flash and out. Welcome sit in the egg and gestate theory#gestalt cutworms.

*When specimen is adequately relaxed, remove from humidity using forceps.*

W. B. P.  
Sunder

*Hold specimen by thorax, and force insect pin  
through middle of body between wings.  
Pin specimen to mounting board.*

Enter smoke and steel wool. Soft like stitch. Soft like flurry. Soft like grind. A caterpillar overtakes the bedrail, crawls beneath quilt, sheet. Crawls a line an inch a deformed and digested hymen. Eat flurry and grind. Specula. Larva silks itself to our throat, weaves# #
